

# Team Accessible-Prototype Milestone

## Requirements Baseline

### 1. Scope Statement

#### In Scope for the Prototype

One connected prototype showing two priority workflows and one offline, failure and recovery workflow, using synthetic content only.

| Workflow                                | Description                                                                                                                                                       | Requirements Covered |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| P1: Activity Discovery & Offline Save   | A facilitator searches and filters activities by subject and grade, then saves one to the device for offline use                                                  | DG-01, DG-02         |
| P2: Session Plan Creation               | A facilitator creates an activity with instructions, materials, safety and inclusion notes, then schedules it in the planner with validation and error guidance   | DG-03                |
| OF: Offline Save, Sync Queue & Recovery | A facilitator switches on the offline simulation, saves a plan, sees a sync attempt blocked with the plan kept as pending, then restores the connection and syncs | DG-04, DG-05, DG-07  |
| Cross-cutting                           | Accessibility checks, no pupil identity data, and low-data, text-first design                                                                                     | DG-08, DG-09, DG-10  |

#### Out of Scope or Deferred

| Item                                                                                                                                                                            | Reason                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| Shared-kit tracking (DG-06)                                                                                                                                                     | Should-priority and not part of the three selected workflows; no kit screen in the prototype. Deferred. |
| Administrator content updates (DG-11)                                                                                                                                           | Addressed in handover notes, not as a prototype screen                                                  |
| Per-user drafts and clear-data control (DG-12)                                                                                                                                  | No such control in the current prototype; can be reinstated if added                                    |
| Duration and materials filters (part of A2 DG-01)                                                                                                                               | Not in the prototype; see CL-05                                                                         |
| Retry, Needs Review and conflict handling (part of A2 DG-05)                                                                                                                    | Not in the prototype; see CL-09                                                                         |
| Production application, full architecture, real server synchronisation, service-worker caching, real school deployment, external stakeholder contact, formal WCAG certification | Not required by the brief. Sync and offline mode are simulated in the prototype                         |

## 2. Prioritised Requirements Baseline

Priority uses MoSCoW. Status shows whether the requirement is represented in the prototype or deferred.

| ID    | Type       | Requirement                                                                                                                                                                                                                                                                                                            | Priority | Source Evidence                                                                                                                              | Prototype Status                                                              |
|-------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| DG-01 | Functional | A facilitator shall be able to search activities by keyword and filter them by subject and grade, and the list shall show only matching activities                                                                                                                                                                     | Must     | A2 baseline DG-01; A2 Sequence A; prototype filter panel                                                                                     | In prototype (P1). Duration and materials filters deferred (CL-05)            |
| DG-02 | Functional | A facilitator shall be able to save a selected activity to the device, and it shall remain listed under Saved and openable after a page reload, including when the prototype's offline mode is on                                                                                                                      | Must     | A2 baseline DG-02; A2 Sequence A; prototype Saved screen                                                                                     | In prototype (P1). Offline is simulated (CL-06)                               |
| DG-03 | Functional | A facilitator shall be able to create an activity (title, subject, grade, duration, instructions, objective, materials, safety and inclusion notes) and schedule it in the planner with a date, learner count and notes. Required fields shall be validated, and each error shall name the field and say how to fix it | Must     | A2 baseline DG-03; A2 interaction flow steps 2-3; A3 brief (validation and recovery guidance); prototype Create Activity and Planner screens | In prototype (P2). Validation partly met (CL-07)                              |
| DG-04 | Functional | A plan saved while offline shall show as pending, and shall show as synced after the user syncs it once connectivity returns                                                                                                                                                                                           | Must     | A2 baseline DG-04; A2 Sequence B; A2 API contract; prototype Planner sync controls                                                           | In prototype (OF). Sync is manual (CL-08)                                     |
| DG-05 | Functional | The planner shall show sync status as No plan, Pending or Synced with a text badge. If sync is attempted while offline, the local plan shall be kept and the user told that sync is unavailable. The user shall be able to sync again once connectivity returns                                                        | Must     | A2 baseline DG-05; A2 interaction flow steps 5-9; prototype status card and syncPlan()                                                       | In prototype (OF). Retry, Needs Review and conflict handling deferred (CL-09) |

|       |                              |                                                                                                                                                                                                                                                                                         |        |                                                                                                         |                                                                                    |
|-------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|
| DG-06 | Functional                   | A facilitator shall be able to record the intended date, responsible person and return status for a shared kit                                                                                                                                                                          | Should | A2 baseline DG-06; A2 interaction flow                                                                  | Deferred (CL-12)                                                                   |
| DG-07 | Quality (reliability)        | The latest saved draft shall be preserved when connectivity is lost, including after a simulated connection drop and a page reload                                                                                                                                                      | Must   | A2 baseline DG-07; A2 Sequence B offline path; prototype Save draft and localStorage                    | In prototype (OF)                                                                  |
| DG-08 | Quality (accessibility)      | Core tasks shall meet WCAG 2.2 AA-aligned checks: full keyboard operation with visible, logical focus; labelled fields with instructions; text contrast of at least 4.5:1; status and errors shown by text or icon as well as colour; reflow at 320 CSS px without horizontal scrolling | Must   | A2 baseline DG-08; A3 brief (accessibility evidence list); prototype skip link, labels and live regions | In prototype (P1, P2, OF). Some contrast checks fail on calculation (see findings) |
| DG-09 | Quality (privacy)            | Activity creation, planning and synchronisation shall not require or store pupil names, profiles or photographs, and all prototype content shall be synthetic                                                                                                                           | Must   | A2 baseline DG-09; A3 brief (ethics and synthetic data); prototype forms and activities.js              | In prototype (P2, OF)                                                              |
| DG-10 | Sustainability (low data)    | Both priority workflows shall be completable without images or video, and a plan shall be stored and synchronised as text and numbers only                                                                                                                                              | Should | Gap against A2; A3 brief (costly data, intermittent internet, low-specification devices)                | In prototype (P1, P2, OF)                                                          |
| DG-11 | Sustainability (maintenance) | A non-technical administrator shall be able to update activity content without developer help, and written recovery steps shall exist for a failed sync                                                                                                                                 | Should | Gap against A2; A3 brief (limited technical support, local maintenance)                                 | Deferred; handover notes not yet written (CL-13)                                   |

|       |                                     |                                                                                                                                     |        |                                                                                |                                                   |
|-------|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|--------|--------------------------------------------------------------------------------|---------------------------------------------------|
| DG-12 | Quality (shared-device data safety) | Drafts on a shared device shall be separated per user, and a user shall be able to clear their local drafts at the end of a session | Should | Gap against A2 (DG-02 mentions shared devices only); A3 brief (shared devices) | Deferred: no control in current prototype (CL-14) |
|-------|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|--------|--------------------------------------------------------------------------------|---------------------------------------------------|

### 3. Change and Selection Log

CL-01 to CL-04 are taken from the A2 "A1 feedback and change summary". CL-05 to CL-15 are proposed changes for A3, made after reviewing the prototype code, README and the A3 brief, and need the team's decision before they are treated as agreed. No conflicts between team members' work are recorded because teammates' inputs have not been received.

| Log   | Req ID | Type      | Description                                                                                            | Reason and Evidence                                                                                   | Decided By | Date                                   | Status         |
|-------|--------|-----------|--------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|------------|----------------------------------------|----------------|
| CL-01 | DG-04  | Clarified | Sync clarified as queued offline-plan sync. Adds Sync Queue and Sync Service                           | A2 "A1 feedback and change summary". Sync was not fully stated; makes offline behaviour implementable | A2 author  | A2 submission date (15 September 2026) | Recorded in A2 |
| CL-02 | DG-05  | Added     | Visible sync status and recovery added; creates an exception path                                      | A2 "A1 feedback and change summary". Failure handling was not explicit                                | A2 author  | A2 submission date (15 September 2026) | Recorded in A2 |
| CL-03 | DG-08  | Specified | Accessibility constraints made testable: readable text, contrast, keyboard support and non-colour cues | A2 "A1 feedback and change summary". Accessibility was broad                                          | A2 author  | A2 submission date (15 September 2026) | Recorded in A2 |
| CL-04 | DG-09  | Specified | Privacy made a testable condition: no pupil identity fields                                            | A2 "A1 feedback and change summary". Privacy was high-level                                           | A2 author  | A2 submission date (16 September 2026) | Recorded in A2 |

|       |       |           |                                                                                                                                                                                                                                                                 |                                                                                                                                    |                                 |            |          |
|-------|-------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|------------|----------|
| CL-05 | DG-01 | Corrected | Filters changed from level, duration, topic and materials to keyword search, subject and grade. Search covers title, subject, description and objective. Duration and materials filters deferred                                                                | activities.js<br>searchActivities()<br>) and the filter panel in<br>prototype.html                                                 | Proposed;<br>team to<br>confirm | 5 Oct 2026 | Proposed |
| CL-06 | DG-02 | Reworded  | "Opens with connectivity disabled" changed to "remains listed and openable after a page reload, including in offline mode". Offline is a simulated toggle and there is no service worker, so real network-off use needs the page already loaded locally         | storage.js (saved<br>ids in<br>localStorage);<br>planner.js<br>toggleConnectivity(); no service<br>worker in the<br>files reviewed | Proposed;<br>team to<br>confirm | 5 Oct 2026 | Proposed |
| CL-07 | DG-03 | Scoped    | Requirement kept. Create Activity uses native browser validation on six required fields. Planner checks only that an activity is selected, shown as a toast that disappears after 3 seconds; date and learners are not validated. Status recorded as partly met | prototype.html<br>required<br>attributes;<br>planner.js<br>saveCurrentPlan()<br>); app.js<br>showToast()                           | Proposed;<br>team to<br>confirm | 5 Oct 2026 | Proposed |

|       |                            |                      |                                                                                                                                                                                                     |                                                                                                         |                           |            |          |
|-------|----------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|---------------------------|------------|----------|
| CL-08 | DG-04                      | Corrected            | Sync is manual: restoring the connection does not sync automatically. Wording changed from "synchronise when connectivity returns" to "synced after the user syncs it once connectivity returns"    | planner.js toggleConnectivity() does not call syncPlan()                                                | Proposed; team to confirm | 5 Oct 2026 | Proposed |
| CL-09 | DG-05                      | Aligned / deferred   | Status labels aligned with the badge (No plan, PENDING, SYNCED). Retry, Needs Review and 409 conflict handling from A2 deferred. A FAILED style exists in updatePlannerStatus() but no code sets it | planner.js updatePlannerStatus() and syncPlan()                                                         | Proposed; team to confirm | 5 Oct 2026 | Proposed |
| CL-10 | DG-07, DG-08, DG-09, DG-10 | Clarified / expanded | DG-07 adds page reload. DG-08 adds focus order, 4.5:1 contrast and 320 px reflow. DG-09 adds synthetic content. DG-10 reworded to match the stored plan object                                      | A3 brief accessibility and ethics rules; planner.js plan object                                         | Proposed; team to confirm | 5 Oct 2026 | Proposed |
| CL-11 | DG-10, DG-11, DG-12        | Added                | New sustainability and shared-device requirements                                                                                                                                                   | Gap analysis: A2 has no requirement for costly data, local maintenance or shared-device data separation | Proposed; team to confirm | 5 Oct 2026 | Proposed |
| CL-12 | DG-06                      | Deferred             | Kit tracking excluded from the prototype                                                                                                                                                            | Should priority; no kit code or screen; outside the selected workflows                                  | Proposed; team to confirm | 5 Oct 2026 | Proposed |

|       |        |                   |                                                                                                                                                                                                                           |                                                                                                                 |                                    |            |          |
|-------|--------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------|------------|----------|
| CL-13 | DG-11  | Deferred          | Administrator content updates covered in handover notes, not as a screen                                                                                                                                                  | Not a prototype screen. README.md covers installation only, with no administrator update or sync recovery steps | Proposed; team to confirm          | 5 Oct 2026 | Proposed |
| CL-14 | DG-12  | Deferred          | Per-user drafts and clear-all control excluded. All data is stored under shared stemmate_* keys                                                                                                                           | storage.js STORAGE_KEYS; no user separation                                                                     | Proposed; team to confirm          | 5 Oct 2026 | Proposed |
| CL-15 | README | Conflict recorded | README uses FR, QR and SR ids and describes features not found in the code (see conflict record below). The baseline follows the code. The README author should correct or remove the claims and confirm the ID crosswalk | README.md compared with prototype.html and the js and css files                                                 | Proposed; README author to respond | 5 Oct 2026 | Open     |

## Workflow selection record

| Workflow                              | Requirements covered       | Basis for selection                                                                                      | Alternative considered                                                                      |
|---------------------------------------|----------------------------|----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| P1: Activity Discovery & Offline Save | DG-01, DG-02, DG-08, DG-10 | Core entry task; A2 Sequence A; Activities and Saved screens exist and are wired up in app.js            | Browse-only workflow (no offline save): rejected because offline use is central to the case |
| P2: Session Plan Creation             | DG-03, DG-07, DG-08, DG-09 | Main facilitator output; A2 Sequence B; Create Activity and Planner screens exist and store data locally | None recorded                                                                               |

|                                         |                     |                                                                                                                                                                                 |                                                                                               |
|-----------------------------------------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| OF: Offline Save, Sync Queue & Recovery | DG-04, DG-05, DG-07 | Meets the brief's offline/failure requirement: with offline mode on, a sync attempt is blocked, the plan is kept as pending, and sync succeeds after the connection is restored | Kit tracking (DG-06) as the third workflow: not selected; no screen exists and it is a Should |
|-----------------------------------------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|

Decision owner and date for the workflow selection: team confirmation pending.

## Team conflict record: README versus code

The README describes the prototype differently from the code reviewed. Until the author responds, the baseline follows the code.

| README claim                                                                       | What the code shows                                                                                                                 |
|------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Core bundle under 5 KB                                                             | prototype.html alone is 35.6 KB (GitHub file view); the JS and CSS files add more.                                                  |
| <form id="plannerForm"> validates dates, safety instructions and inclusion prompts | The form id is planner-form. Only activity selection is validated.                                                                  |
| <fieldset class="form-group"> with numeric attendance counters                     | No fieldset or attendance statistics. The forms hold a learner count only.                                                          |
| function simulateSync(scenario) simulates an equipment double-booking conflict     | No such function. syncPlan() handles only the offline-blocked and success cases. There is no conflict or equipment booking.         |
| Shape cues (circle versus triangle) show sync status                               | The status dot is a plain circle in both states. State is given by text labels.                                                     |
| Touch targets are exactly 44 by 44 px                                              | The delete button is 42 by 42 px and small buttons are about 36 px high. The WCAG 2.2 AA minimum is 24 px, which appears to be met. |
| Contrast of at least 4.5:1 is guaranteed                                           | Several colour pairs calculate below 4.5:1 (see DG-08).                                                                             |
| git clone https://github.com                                                       | The command has no repository path and will not clone the project.                                                                  |
| No external dependencies or CDN                                                    | Confirmed: no CDN, web fonts or images in the files reviewed.                                                                       |

## ID crosswalk (proposed)

The README cites FR, QR and SR ids. These are inferred from its wording and must be confirmed by whoever owns them.

| README id | Meaning in README              | Proposed baseline id                      |
|-----------|--------------------------------|-------------------------------------------|
| FR-03     | Offline planner input          | DG-03                                     |
| FR-05     | Sync conflict handling         | DG-05 (conflict handling deferred, CL-09) |
| FR-08     | Privacy-safe numeric headcount | DG-09                                     |

|              |                                   |       |
|--------------|-----------------------------------|-------|
| QR-01        | Durable local draft storage       | DG-07 |
| QR-02, SR-02 | Low network cost and small bundle | DG-10 |

## 4. Traceability Matrix

Chain: evidence (A2) → requirement → prototype element → evaluation check. Element names are ids and functions in the prototype code. Results stay "Not yet tested" until the team's evaluation with approved adult classmates or simulated stakeholders is complete.

| Req ID | Evidence (A2)                                              | Requirement Summary                                                                                     | Prototype Element                                                                                                                  | Evaluation Check                                                                                                                                            | Result         |
|--------|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| DG-01  | A2 baseline DG-01; A2 Sequence A                           | Search by keyword and filter by subject and grade; list shows only matches.                             | P1: #activity-search, #subject-filter, #grade-filter, #activity-results; searchActivities(), renderActivityResults()               | Type a keyword; apply each filter and combinations; every result matches. Use a filter with no match and confirm the "No activities found" message.         | Not yet tested |
| DG-02  | A2 baseline DG-02; A2 Sequence A                           | Save activity to device; stays listed under Saved and openable after reload, including in offline mode. | P1: Card Save buttons (data-save-activity), detail "Save for offline", #screen-saved; toggleSavedActivity(), loadSavedActivities() | Save an activity, switch offline mode on, reload, open it from Saved. Unsave and confirm it disappears.                                                     | Not yet tested |
| DG-03  | A2 baseline DG-03; A2 interaction flow steps 2–3; A3 brief | Create activity and schedule it in the planner; validate required fields with fix instructions.         | P2: #create-activity-form (6 required fields), addCustomActivity(); #planner-form, saveCurrentPlan()                               | Submit Create Activity with required fields empty. Save a plan with no activity, then with no date or learners. Confirm each error names the field and fix. | Not yet tested |
| DG-04  | A2 baseline DG-04; A2 Sequence B; A2 API contract          | Offline plan shows as pending; shows as synced after the user syncs on reconnection.                    | OF: #toggle-connection, #save-and-sync, #sync-plan, #planner-status-badge; toggleConnectivity(), syncPlan()                        | Switch offline, save and prepare sync, confirm Pending and the message. Restore connection, press Sync plan, confirm Synced.                                | Not yet tested |

|       |                                                                   |                                                                                                                                       |                                                                                                                                      |                                                                                                                                                     |                |
|-------|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| DG-05 | A2 baseline DG-05; A2 interaction flow steps 5–9; A2 API contract | Badge shows No plan, Pending, Synced; offline sync attempt keeps the plan and explains; user can sync again.                          | OF: #planner-status-badge, #sync-step-local, #sync-step-waiting, #sync-step-synced; updatePlannerStatus()                            | Step through No plan, Pending and Synced; confirm each has a text label. Attempt sync offline and confirm the plan is kept and the message appears. | Not yet tested |

| DG-12 | Gap against A2; A3 brief | Drafts on shared device separated per user; user can clear local drafts at end of session. | Deferred: STORAGE_KEYS in storage.js (CL-14) | Deferred. If reinstated, confirm user B cannot see user A's drafts and that clearing removes local drafts. | Deferred |
|-------|--------------------------|--------------------------------------------------------------------------------------------|----------------------------------------------|------------------------------------------------------------------------------------------------------------|----------|

## Code review findings

These findings come from reading the prototype code and CSS values. They are not test results.

| Req ID | Code review finding (not a test result)                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DG-01  | Filters on title, subject, description, objective, subject and grade; updates live; empty-state message present. Materials and duration not filterable.                                                                                                                                                                                                                                                                                                              |
| DG-02  | Saved ids kept in localStorage and listed on Saved; toast confirms. Offline is simulated and there is no service worker.                                                                                                                                                                                                                                                                                                                                             |
| DG-03  | Create: native browser validation. Planner: activity only, via a toast that hides after 3 s. Date and learners not validated.                                                                                                                                                                                                                                                                                                                                        |
| DG-04  | Offline attempt keeps the plan pending with a message. Online sync completes after a 0.9 s simulated delay. Restoring connection does not sync automatically.                                                                                                                                                                                                                                                                                                        |
| DG-05  | Badge shows No plan, PENDING, SYNCED. A FAILED style exists but nothing sets it. No retry button or conflict handling.                                                                                                                                                                                                                                                                                                                                               |
| DG-06  | Confirmed absent from the code reviewed.                                                                                                                                                                                                                                                                                                                                                                                                                             |
| DG-07  | Plan and connection state restored from localStorage on load. Saved only on button press; one plan at a time. After a reload in offline mode the toggle still reads "Simulate offline mode".                                                                                                                                                                                                                                                                         |
| DG-08  | Native buttons, labels, skip link and reduced-motion support present; layout becomes one column at 700 px. Calculated contrast below 4.5:1: PENDING badge 2.9, Offline label 3.2, warning toast 3.2, SYNCED badge 4.2, inactive sync steps 2.1. Input borders 1.2:1 and button focus ring 1.5:1 are below 3:1. Not found: focus moved after screen change, aria-current, unique names on View and Save buttons. Confirm with a contrast tool and a real 320 px test. |
| DG-09  | Only a learner count is stored. Built-in activities are generic. Free-text fields could hold personal data if testers type it.                                                                                                                                                                                                                                                                                                                                       |
| DG-10  | No images, CDN or web fonts; icons are emoji. Plan holds text and numbers only. Sync is simulated, so no network request is made. README claim of a bundle under 5 KB is wrong: prototype.html alone is 35.6 KB.                                                                                                                                                                                                                                                     |
| DG-11  | README has no administrator update or sync recovery steps, and its clone command has no repository path.                                                                                                                                                                                                                                                                                                                                                             |
| DG-12  | All data under shared stemmate_* keys. Only individual custom activities can be deleted.                                                                                                                                                                                                                                                                                                                                                                             |

## 5. Open Items Before Submission

| No | Item                                                                                                     | Action Required                                                                                                                  | Owner                           | Status |
|----|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|---------------------------------|--------|
| 1  | README claims do not match the code (CL-15).                                                             | Share this baseline with the README author; correct or remove the unsupported claims before submission.                          | Team                            | Open   |
| 2  | Contrast, focus and reflow were assessed from code only.                                                 | Confirm contrast ratios with a tool, and test focus, keyboard use and 320 px reflow in a browser.                                | Accessibility and testing roles | Open   |
| 3  | Code review is not testing.                                                                              | Check the findings in the evaluation. Record a prototype change as evidence-led only if an evaluation task surfaces the problem. | Testing role                    | Open   |
| 4  | Gaps found in the prototype: planner validation, no retry, manual sync, toggle label, contrast failures. | Decide whether to fix or accept them, then update CL-07 to CL-09.                                                                | Team                            | Open   |
| 5  | Handover notes are missing (DG-11).                                                                      | Write administrator content update steps, sync recovery steps and a working clone command.                                       | Documentation role              | Open   |
| 6  | Proposed changes are unconfirmed.                                                                        | Confirm or reject CL-05 to CL-15 and the ID crosswalk, then record who decided and when.                                         | Team                            | Open   |
| 7  | Teammates' A1 and A2 requirements are not reconciled.                                                    | Compare teammate documents; add conflicts to the change log.                                                                     | Requirements Engineer           | Open   |

## 6. Declarations

### AI Use

Claude was used to structure this baseline. Helped in verification of the code.
